DECISIONS

The Süleyman Demirel University Community-Based Medical Education Board (SDÜTF-TODAİK) convened on 29 March 2018 in Meeting Hall A of the Dean's Office Building, with the participation of the majority of the board members. At the meeting:

1. It was proposed to the Department of Public Health that, in connection with health problems that have become significant in society, medical students be taught to carry out public education — in this context, that during every Public Health clerkship, intern students, under the chairmanship of a faculty member, deliver panel-style education aimed at the public (to first-year students of the Faculty of Medicine and other faculties, and to rural areas) concerning the health problems that most commonly cause death and disability.
2. It was decided that, among these training topics, education on the prevention of smoking, alcohol, drugs, and related factors — which have the potential to become a significant problem in our country in the future — would be taught to be delivered by interns under the chairmanship of a faculty member, and that this topic would be proposed to the Department of Public Health.
